Indoor Air Quality Engineering | Delhi NCR

PROJECT COMPLETION & HANDOVER CERTIFICATE

This Certificate confirms the completion of the ventilation and indoor air quality engineering project described below, and records the Client's acceptance of the installation. It triggers the start of the manufacturer warranty period and marks the formal handover of the installed system from the Service Provider to the Client.

1. Project Details

Certificate Date	
Project Reference / Quotation No.	
Agreement Date	
Client Name	
Client Contact	
Project Site Address	
Date Installation Commenced	
Date Installation Completed	

2. Equipment Installed

The following equipment has been installed at the Project Site as part of this engagement:

S.No.	Equipment Model	Qty	Location / Floor	Serial No.
1				
2				
3				
4				
5				
6				

Note: Add additional rows as required. Attach a separate equipment schedule if the list is extensive.

3. Confirmation of Completion

The Service Provider confirms that, in respect of the Project described above:

- Engineering design has been finalised and equipment selection has been completed in accordance with the agreed scope.
- All equipment listed in Section 2 has been physically installed in the designated locations.
- Duct routing, hangers, supports and connections have been completed.
- Grilles and diffusers have been fitted at the designed locations.
- Each unit has been functionally tested in the Client's presence and demonstrated to be working at the designed flow rate.
- Operating instructions and the manufacturer warranty document have been handed over to the Client.

4. Performance Scope (Reaffirmed)

The Client acknowledges and reaffirms the performance scope already set out in the Project Services Agreement and the Client Welcome & Scope Pack:

- The warranted deliverable is filtered fresh air supplied at the designed CMH at each diffuser outlet, with PM2.5 levels at the point of supply meeting the installed filter's specification.
- The Service Provider does not warrant overall indoor PM2.5 or AQI levels within the building. Indoor air quality depends on the building envelope, occupant use, and external infiltration through open doors, jaali doors, kitchen windows and similar openings, all of which fall outside the Service Provider's engineering scope.
- Equipment noise follows manufacturer specifications. Ventilation systems are not silent in operation.

5. Equipment Access and Post-Handover Maintenance

The Client confirms understanding of, and accepts responsibility for, the following:

- All installed ERVs, exhaust fans and ducting must remain accessible behind the false ceiling. Trap doors or access panels should be provided at each unit location. If equipment is sealed permanently against this advice, the cost of accessing it for any future warranty repair or maintenance is the Client's responsibility.
- Filter cleaning every 3 to 6 months, periodic inspection of ERV cores and ducting, and routine equipment care are the Client's responsibility post-handover.
- Failure to maintain the system in accordance with manufacturer specifications may void the warranty and absolves the Service Provider of liability for performance deterioration or equipment failure.
- An optional Annual Maintenance Contract is available from the Service Provider on request.

6. Manufacturer Warranty

All installed equipment is manufactured by third-party companies and carries the manufacturer's standard warranty, which passes through to the Client. The warranty period commences on the Certificate Date set out in Section 1. Warranty claims for product defects, motor or fan failures, or internal equipment faults are addressed directly with the manufacturer or authorised importer. The Service Provider will coordinate such claims on the Client's behalf on a best-efforts basis but is not the warranty obligor.

7. Client Acceptance

By signing below, the Client confirms that:

- The installation described in this Certificate has been completed to the Client's reasonable satisfaction.
- Each piece of equipment has been demonstrated to be in working order.
- The Client has received the equipment warranty documents and operating instructions.
- The Client has read and understood, and accepts, the performance scope and post-handover responsibilities set out above and in the Project Services Agreement.
- Any defect or incomplete item noted at handover has been recorded in writing (a separate snag list, if any, is attached to this Certificate).
