

# Welcome aboard.

## *Cleaner air starts here.*

Thank you for choosing **BreatheWise**, the indoor air quality services arm of Urban Tech Home Solutions. This short document sets out who we are, what we will be delivering on your project, and the boundaries of our role, so that you and your team know exactly what to expect from us, and from the other contractors on site, at every stage.

Your trust means a great deal to us, and we are committed to delivering a ventilation solution that transforms the air quality and comfort of your home.

For this project, **Er. Kabir Batra** will be your primary project supervisor, and you are welcome to reach out to him directly at any time. Please do not hesitate to contact our team for any question or clarification, no matter how small.

### ABOUT BREATHEWISE

## Engineering at the heart of what we do.

BreatheWise is an indoor air quality engineering services firm operating out of Delhi NCR. The core of our work is technical engineering: site assessment, air-change-rate calculations against NCR-specific design parameters, static-pressure modelling across the proposed duct network, equipment specification, layout design, and the careful integration of supply and extract systems within the constraints of your home.

Once that engineering is signed off, our team executes the design end to end: equipment procurement from our supplier catalogues, mechanical installation in the false ceiling, ducting, hangers, grilles and diffusers, followed by functional testing at handover. The engineering decisions are ours; the products we install are sourced from established manufacturers whose warranties cover the equipment itself.

### SECTION 1 · SCOPE OF WORK

## Where our work begins, and where it ends.

*Ventilation in a residential build is a multi-trade exercise. We work alongside your electrician, civil contractor, false ceiling team and painter, each owning their part. The list below sets the line clearly, so nothing falls between the cracks.*

**Please note:** All electrical connection work on site is carried out by your appointed electrical contractor. BreatheWise does not manufacture the equipment we install; product warranties remain with the manufacturer.

### What BreatheWise Does

- Engineering calculations: air-change rates, CMH, static pressure, duct sizing
- Equipment specification & selection from manufacturer catalogues
- Equipment procurement from our supplier (Astberg Ventilation)
- Mechanical installation of ERVs, exhaust fans, ducts, grilles, diffusers
- Duct routing, hanging, joining and leak-tight assembly
- Core cutting through walls and slabs for duct passages
- Cutting wall openings for grilles and louvers
- Functional testing of equipment at project handover

### Outside Our Scope

- × Manufacturing of the equipment (covered by manufacturer warranty)
- × Electrical work: cabling, MCBs, isolators, earthing, panel connections (handled by your electrician)
- × False ceiling fabrication, gypsum and POP work (your false ceiling team)
- × Plastering and making-good of cut surfaces (your mason)
- × Painting and finishing around installation points (your painter)
- × Plumbing and drainage
- × Fire alarm, smoke detector or BMS integration

### What we guarantee, and what depends on you.

*An honest note on indoor air quality, because the difference matters.*

#### WE DELIVER

Filtered fresh air at every diffuser outlet, meeting the installed filter's PM2.5 specification. The system is balanced, positively pressurised, and tested at handover.

#### YOU INFLUENCE

Overall indoor AQI depends on the building envelope and how it is used: open balcony doors, jaali doors, kitchen windows during cooking, gaps under entrance doors. We clean the air we supply; the rest is shaped by how you live in your home.

*A note on sound: ventilation systems are never completely silent. We design ducting to minimise transmitted noise within manufacturer specifications.*

### SECTION 2 · AFTER HANDOVER

**Equipment warranty.** All installed equipment carries the manufacturer's standard warranty, which passes through to you. Warranty claims for product defects or internal equipment faults are addressed directly with the manufacturer; we coordinate. **Routine maintenance** (filter cleaning every 3 to 6 months, periodic inspection of ERV cores and ducting) becomes the homeowner's responsibility after handover. An optional Annual Maintenance Contract is available on request.

*By engaging BreatheWise, the client accepts this scope of work as part of the engagement terms.*
